Bringing consistency and scale to digital follow

Created to deliver efficient, automatic follow capacity behind AEGIS London's terms

This new solution enables brokers and clients to secure meaningful, consistent capacity with significantly faster turnaround times, all facilitated by Augentic's digital underwriting capability.

When a broker presents a risk to AEGIS London to write on an open market basis (in a lead or follow position), AEGIS London will advise the broker that an additional line can be offered by the digital consortium. If the broker wants the additional capacity, they simply need to email aegis@augenticfollow.com for the additional line to be deployed.

Broker and Client Value Proposition

The digital consortium enhances speed, certainty and ease of doing business; allowing brokers to focus more time on client outcomes and maintaining relationships, with less time spent completing placements

Fully aligned terms

The digital consortium follows AEGIS London's terms; removing the risk of receiving variations in coverage from different markets and ensuring a more consistent and aligned offering

No portals, no additional work

Secure additional capacity with no changes to existing processes; simply forward the email submission and Augentic will do the rest. Unlock additional follow capacity with ease

Streamlined Placements

Combining multiple capacity providers, the consortium reduces fragmentation and eliminates the need to approach markets individually

Placement certainty

Fast and consistent decisions

Share the benefits of placement efficiency

An additional 2.5% commission will be offered to brokers for taking up the additional line

High-quality service at every stage

Brokers receive responsive support and clear communication throughout the lifecycle of a policy
